

Why Webster-pak solutions work so well

- Simple, convenient and portable
Reduces error and waste
- A visible reminder to take medication
- Easy to check that medication is taken
- Suitable for all age groups
- Value for money

Praise for Webster-pak

"A lady who recently became a widow was determined to stay active and independent. Despite repeated efforts from close relatives and her doctor, her health went downhill rapidly. A conference between the pharmacist, the family doctor and the relatives resulted in a decision to provide a weekly home delivery of Webster-pak. The pharmacy staff uses the opportunity to ensure her compliance and report any concerns of her wellbeing during each visit. We now have a lot of healthy and happy people in her family." Bill Suen from Thornbury VIC

Pil-Bob® makes pill removal easier

If you have poor eyesight or arthritis, the Pil-Bob makes it even easier to remove medication from a Webster-pak.

The Pil-Bob is compact, light and easy to hold. Simply push the Pil-Bob upward through the back of the foil and the medication is released into the Pil-Bob container, helping to prevent spills.

Webster-pak®

Peace of Mind with Medication™

Takes the worry out of taking medication™

Ask your Pharmacist about Webster-pak today

Taking medicines can be difficult

Many people need to take a number of tablets and capsules every day, but it can be difficult to remember to always take all these medicines as they were prescribed by the doctor.

Clearly, medicines don't work properly when they're not taken as intended. Missed or extra doses can result in extra health problems, falls, hospitalisations and other potentially serious adverse effects.

Webster-pak can help

Webster-pak is an Australian innovation and recognised around the world as a valuable medication management tool. Evidence demonstrates that people who use a Webster-pak system will almost always take their medicines as they are meant to be taken, and as prescribed by their doctor.

Supported by your pharmacy and doctor

Webster-pak systems are well known by pharmacies and doctors. It gives them the confidence that they are doing their best to help you use your medicines the way they were meant to be taken.

Webster-pak takes the worry out of taking medication and brings independence and quality of life for you and concerned relatives, carers or loved ones.

How does Webster-pak work?

Instead of simply handing over your packages and bottles of medicines, Webster-pak solutions work by having your pharmacist dispense all your medicines needed for each day of the week into blister compartments of a Webster-pak, which is then sealed to prevent spilling or mixing up the medicines.

The pack also lists all contents plus other current medicines such as liquids or creams. This provides vital information for hospital or emergency staff and family and friends.

To take the medicines, simply push the blister's contents through the foil backing. With Webster-pak it's always easy to see where you're up to and whether medication has been taken correctly.

Up-to-date medical information saves lives

Picture the following: "An elderly woman is unconscious on the floor. Ambulance officers are struggling to evaluate her condition. They then see on the refrigerator a Webster-pak with a full record of her current medication..."

In a scenario like this, having a Webster-pak, with all its vital information, when being admitted to hospital could save this woman's life.

Solutions for different needs

The Webster-pak system also offers: high-contrast packs for those with low vision, bilingual packs with translated dosage times, and packs for children, travellers and people with disabilities. Webster-pak enables many people to enjoy a better quality of life by living independently and managing their own medication.
