Support Products

A safe way to handle and administer high-risk medication

Cytotoxic medicines should be administered in a safe environment where all healthcare professionals follow principles of safe medication practice. Webstercare's cytotoxic alert and trigger labels, delivery bag and Pil-Bob® device are easy to identify due to the purple colour. They act as an alert for all high-risk medications.

Cytotoxic Pil-Bob®

The Pil-Bob cup is used specifically to remove cytotoxic medications from Webster-pak® systems and help reduce the risk of cross-contamination between medications and residents.

Cytotoxic Delivery Bag

Transport cytotoxic medications between your pharmacy and your facility and alert staff to ensure proper handling techniques are applied.

Cytotoxic Labels

Cytotoxic Handling Label

Used as a warning and safety precaution. The label prompts the user to use the universal 'No Touch Technique' when handling the medications and can be applied to the Webster-pak folder or medications in their original packaging.

CYTOTOXIC

Use universal
No Touch Technique
when handling this medication

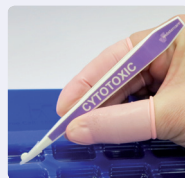

Cytotoxic Trigger Label

Applied to the Webster-pak folder or medication charts to draw attention to the importance of using the correct handling technique.

CYTOTOXIC

Cytotoxic Packing Tweezers

A handy Webster-pak packing accessory, labelled specifically for packing cytotoxic medications to reduce the risk of cross contamination. The pointed precision tip of the Packing Tweezers assists to easily remove tablets or capsules from bottles and blisters. A silicone covering helps to grip small or coated tablets slipping out of grip. Each set of Packing Tweezers comes with a protective case labelled cytotoxic medications for hygienic storage.
